Special Issue on Creative Techniques in Leadership Learning and Development

Preface

Gareth Edwards, Carole Elliott, Marian Iszatt-White and Doris Schedlitzki

1. From experiential learning to aesthetic knowing: The arts in leadership development

Ian Sutherland and Jasna Jelinek

Fiona Kennedy, Ralph Bathurst, and Brigid Carroll

3. Images of Leadership Development from the Inside Out

Heather Cairns-Lee

4. Developing the theatre of leadership: an exploration of practice and the need for research

Tammy Towadros

5. Using Storytelling Theatrics for Leadership Training

David M. Boje, Grace Ann Rosile, Jillian Sylors, and Rohny Sylors

6. Exploring Critical Perspectives of Toxic and Bad Leadership through Film

Gareth Edwards, Doris Schedlitzki, Jenna Ward and Martin Wood
7. The Dark Side: The Poetics of Toxic Leadership

Andrew Armitage

Thomas N. Garavan, Ann McGarry, Sandra Watson, Norma D’Annunzio-Green and Fergal O’ Brien
Preface - Using creative techniques in leadership learning and development: An Introduction

Gareth Edwards, Carole Elliott, Marian Iszatt-White and Doris Schedlitzki

The Problem – Leadership development programmes have become prolific in organizations in both the public and private sectors, with new initiatives endlessly being developed. Empirical and conceptual work that challenges some of the mainstream approaches to leadership learning and development has led to initiatives increasingly becoming complex in nature and to the use of innovative and unusual approaches. There is limited knowledge, however, regarding the impact of such techniques.

The Solution - This issue focuses on some core themes around enabling and enacting leadership development in organizations through creative techniques using art, poetry, symbolism, theatre, drama, and film, and is rooted in experiences of delivering such interventions in a range of countries, sectors, and professions. Each article explores how these techniques can be translated into practice across a wide of variety leadership learning and development contexts and is rooted in the contemporary and critical leadership literature.

The Stakeholders – Human resources (HR) professionals seeking to identify key considerations in selecting creative techniques for effective leadership learning and development interventions, and academics advising on such selections will be interested in these articles, which will also set the basis for further empirical research and theoretical reflection on the topic.

Leadership development programmes have become prolific in organizations (see Gill, 2011), in both the public and private sectors. Driven by the need for leadership learning and development, and reportedly receiving $50 billion of investment in 2000 (Ready & Conger 2003), this area of HR management practice is a
fast paced world where new initiatives are endlessly being developed. For example, recent years have seen the emergence of a range of aesthetic and critical approaches (see Edwards, Elliott, Iszatt-White & Schedlitzki, 2013, for a review) and there has been significant empirical and conceptual work (e.g. Cunliffe, 2009; Ford & Harding, 2007; Sinclair, 2007) that challenges some of the mainstream approaches to leadership learning and development. This has led to initiatives increasingly becoming complex in nature and involving the use of innovative and unusual approaches: the use of art (e.g. Callahan, Whitener & Sandin, 2007; Gayá Wicks & Rippin, 2010; Schyns, Tymon, Kiefer & Kerschreiter, 2013; Sutherland, 2013), literature (e.g. Keller, 2007; Smith Mathis, 2007), stories (e.g. Browning, 2007), and cultural artefacts (Callahan, Whitener & Sandin, 2007; Callahan & Rosser, 2007) as a basis for leadership reflection is increasing. There is limited knowledge, however, regarding the impact of such techniques.

Originating in the recognition that leadership cannot be reduced to an entirely rational process, there has been an increasing interest in emotional and social intelligence (e.g. Chemers, 2001; Yukl, 2001) in the leadership literature. This is mirrored by the perceived need for leadership learning and development interventions to go beyond the traditional - largely rational - classroom based programmes of the past (Adler, 2011; Carroll, Levy & Richmond, 2008; Edwards, Elliott, Iszatt-White, & Schedlitzki, 2013), with arts-based methods and other creative techniques gaining ground in both the literature and in practice. Founded in experiential learning more broadly, arts-based interventions introduce leaders to different forms of art such as literature, drama, music, and drawing (Springborg, 2012; Sutherland, 2013) in order to provide an experiential learning opportunity through which leaders can learn by ‘transforming aesthetic experiences to develop non-rational, non-logical capabilities and self-knowledge’ (Sutherland 2012: 25). It is argued that these approaches have the potential to connect cognitive and emotional processes, provide challenge to underpinning assumptions, and highlight the relational and subjective aspects of human experience (Adler, 2006; Barry & Meisiek, 2010; Taylor & Ladkin, 2010). As with all experiential learning, the aim is to bring about ‘a transformation of experience into new knowing through perception, cognition and behaviour in an adaptive process’ (Kolb, 1984, cited in Sutherland & Jelinek, this issue).

Those advocating the use of creative techniques in leadership learning and development have also aligned such interventions with the perceived need for leadership development to address issues of leader identity and self-awareness and hence the need for development programmes to provide ‘identity workspaces’ (Petriglieri, 2012) where such learner-centred, personal transformation can be undertaken (Antonacopoulou and Bento,
2004). To this end, more individualised interventions are used to encourage leadership learners to examine and reflect on their own experience (Petriglieri, Wood & Petriglieri, 2011). Creative approaches which have been brought into service in this context have included the use of the visual arts (Adler, 2006; Baker & Baker, 2012) and poetry (Richardson, 1997) to encourage self-expression, and the use of storytelling theatrics as a mechanism for developing leadership relationally (Elliott & Stead, 2008).

This issue aims to keep up with the fast paced world of leadership learning and development by exploring some core themes around enabling and enacting leadership development in organisations through creative techniques using art, poetry, symbolism, theatre, drama, and film. The focus is on highlighting these approaches based on experiences of delivering such interventions in a range of countries (Slovenia, New Zealand, the United Kingdom [UK], Ireland, and the United States of America [US]), sectors, and professions. Each article outlines a novel approach to leadership learning and development and explores how these techniques can be translated into practice across a wide variety of organizations as well as rooting them in the contemporary and critical leadership literature.

**Purpose of the Issue**

Previous interest in the topic of creative techniques for leadership learning and development speak to the growing interest in and need for enhancing the repertoire of effective interventions available to those who commission and deliver such interventions. ADHR has been at the forefront of this interest with issues exploring emerging theories and interventions (Ardichvili & Manderscheid, 2008) such as emotional intelligence, psychoeducational methods, and career planning programmes; how events made accessible by modern media (for example, tragedies on Everest and the re-telling of Shackleton’s story) inform leadership education (Cummins, 2007); and – the flip side of the concerns addressed in this issue – developing leadership interventions for those people leading creative efforts (Mumford and Gibson, 2011).

What has so far been missing is a critical review of current techniques and how these techniques are being used in the practical environment of management development. This issue will hope to address this perceived gap by -
Creating a more critical engagement with the literature, research, and practice that will enable HR professionals to make informed judgements regarding the use of creative techniques on leadership learning and development programmes and interventions;

- Helping to transfer knowledge of contemporary leadership learning and development techniques to those involved in the learning and education business; those actively involved in helping HR departments in organisations to deliver quality products that have real impact on leadership development; and

- Developing contemporary leadership theory that relates to the practice of designing and delivering leadership programmes across organisations

The extensive spread of activities and interventions now emerging to support leadership learning and development provides a challenge to HR professionals and academics, in advising on and selecting appropriate methods to include in leadership development programmes. The articles in this issue will help HR professionals identify key aspects and considerations when commissioning leadership learning and development in and across organizations and will set the basis for further empirical research and theoretical reflection on this important topic.

Contributions of Current Issue Articles

The special issue therefore consists of eight papers that describe and dissect differing creative techniques used in leadership learning and development interventions. These techniques include choral conducting workshops (article 1 by Ian Sutherland and Jasna Jelinek), montage (article 2 by Fiona Kennedy, Ralph Bathurst and Brigid Carroll), metaphor (article 3 by Heather Cairns-Lee), theatre (article 4 by Tammy Tawadros), storytelling theatre (article 5 by David Boje, Grace Ann Rosile, Jillian and Rohny Sylors), film (article 6 by Gareth Edwards, Doris Schedlitzki, Jenna Ward and Martin Wood) and poetry (article 7 by Andrew Armitage). The final article in the special issue is a comparative analysis of arts based interventions and more conventional leadership learning techniques by Thomas Garavan, Ann McGarry, Sandra Watson and Fergal O’ Brien.

Acknowledging that choral conducting workshops are rarely found in leadership development programmes, Sutherland and Jelinek argue that arts-based learning approaches’ strength lies in their ability to
connect the intellectual with the emotional. They explore executive management students’ experience of
conducting choral master classes, across three separate leadership development interventions, through analysis
of observational and interview data. The study is theoretically grounded in two main bodies of work:
experiential learning, specifically in relation to management and leadership learning and education; and
literature that seeks to connect sensemaking and aesthetic knowing. They define aesthetic sensemaking as
‘meaning making based on our feelings about what’s going on around us’. Arts-based learning methods use
three concepts to explore how aesthetic knowing takes place: mastering craft; engaging metaphorically;
organizational aesthetics. Sutherland and Jelink’s key contribution is to connect theoretical conceptualisations
of arts-based learning with a study of an arts-based method in practice. Their findings illustrate the significance
of sensory triggers to stimulate reflection on individual’s leadership practice. The move away from
predominantly cognitive learning methods towards aesthetic sensemaking encourages participants’ reflexive
sensemaking. They conclude by recognising the risk involved in using arts-based methods within leadership
development, particularly from the learning and development professional’s perspective. They therefore call
for an increased focus on creating psychological safety and the agency of facilitators.

Kennedy, Bathurst and Carroll situate their article within the adaptive leadership literature which calls for
leaders to surface tensions and differences, phenomena that regularly remain submerged within organisational
structures that seek efficiencies and privilege homogeneity. They argue that learning and development
practitioners, who engage with leaders sympathetic to this way of working, require methods that go beyond
the learning of new skills. They propose montage—a technique adapted from the movie industry—as a method
with the potential to disrupt mindsets and taken-for-granted ways of working.

Kennedy et al highlight arts-based methods’ ability to stimulate presentational ways of knowing, which
facilitate access to emotional and embodied experiences. Such ways of knowing stand in contrast to
propositional understandings of knowledge that privilege the cognitive aspects of organizational life which
reward us for what we know ‘about’ something or somebody.

The article’s empirical material focusses on the second phase of an in-house leadership development
program for a large public hospital in Australasia. Kennedy et al discuss in detail their work with Daniel, a
clinical director, who had been appointed to lead change in a previously under-resourced area of the hospital.
An area of personal development identified by Daniel was a need to allow team members to contribute to
discussions, rather than them acquiescing to his impatient and enthusiastic ideas. To facilitate this development work he was invited to construct a montage assembled from different images of the department during the change process, providing him with the opportunity to acknowledge competing realities. Analysis of this learning process lead Kennedy et al to a number of conclusions including recognition of the limitations of cognitive approaches when working with conflict and difference. Such approaches are, they propose, unlikely to be sufficient in engaging individuals in new practices within asymmetrical power relationships. By contrast an arts-based method such as montage, has the ‘the potential to be a circuit breaker’ within the organizational setting and a method with which researchers can explore individuals’ emotional responses to organizational dynamics.

Our third paper by Heather Cairns-Lee builds on Schyns, Kiefer, Kerschreiter & Tymon’s (2011) implicit leadership theory (ILT) to consider how authentic leadership and self-awareness might be developed through an approach which illuminates leaders’ mental models and the naturally occurring metaphors and ILTs. Cairns-Lee uses the Clean Language approach developed by Grove (1989) to facilitate interviews with eight leaders working at CEO, CFO and Director level as a means to surface the naturally occurring metaphors about leadership held by them. Metaphors surfaced through the interview process and subsequent drawing exercise include: Leadership falling off the table in environments of stress, an Eagle, a Shepherd, a Wolf pack, Connecting the Dots, a Scout on an Adventure, a Greek flag and Being under the Microscope. Cairns-Lee notes the idiosyncratic and nuanced nature of these metaphors, a significant departure from the more prevalent deductive metaphors used to describe leadership.

Tammy Tawadros’ article proposes a model for the evaluation of improvisational theatre techniques in leadership development programs. A strength of these approaches is their ability to provide participants with the opportunity to discover and rehearse diverse leadership behaviors in a group context, thereby generating exposure to a form of experiential learning conducive to emotional and cognitive analysis. Nevertheless, Tawadros highlights the dearth of literature that evaluates such approaches’ effectiveness; a gap which might be explained by the difficulty of analysing the mechanisms of learning as a sense-making process. In her article Tawadros proposes a model based on conversational analysis as a method to examine in depth dialogic interactions within drama-based leadership development interventions. In focusing on micro-interactions between participants as a data source, Tawadros suggests this provides access to patterns and structures of
dialogue that might be used as ‘evidence-based practice’ for leadership development interventions using drama-based techniques.

The fifth article by David M. Boje, Grace Ann Rosile, Jillian Saylors and Rohny Saylors describes a process called storytelling theatrics, designed to assist participants explore power dynamics within leader-follower relations. Boje et al describe three approaches to theatrics grounded in the work of Freire (1970) and Boal (1979, 1992, 1995): image, invisibility and form theatre, and discuss participants’ reactions to these methods. A particular strength of these methods is that they prompt participants to engage with a deconstruction process regarding leadership stories by discovering multiple sides of any one story, surface marginalized voices and highlighting organizational power dynamics and draw attention to leadership as a relational process. The article will appeal to leadership development theorists and practitioners alike as the authors take us step-by-step through each theatrical approach, which present methods to explore theoretical developments regarding leadership as a relational process.

Edwards, Schedlitzki, Ward and Wood suggest film analysis as an approach to facilitate students’ understandings of toxic and bad leadership. They suggest that the storyline of the film Batman: The Dark Knight (Nolan, 2008) reflects how societies’ perceptions of good and evil have informed how bad or toxic leadership is defined. However, Batman: The Dark Knight’s storyline problematizes this simplistic dichotomy as the film’s narrative challenges normative assumptions of how good and evil are formed.

Recognising the multi-media literacy of many students, Edwards et al describe a critical post-structuralist approach to film analysis, drawing in particular on the critical interrogation approach of Buchanan and Huczynski (2004) and Tyler, Anderson and Tyler (2009). They describe an iterative process of viewing, discussion and analysis; a method which opens up discussion possibilities for students’ sense-making experiences. They argue that use of cinematic analogy as a leadership learning technique, alongside a constructionist process of interpretation and analysis affords active exploration of the socially relative in conceptualisations of good, bad and toxic leadership. Edwards et al’s article articulates a specific approach to film analysis, and in so doing challenges normative assumptions about toxic and bad leadership in the leadership literature.
Andrew Armitage, the author of the seventh paper is also interested in examining toxic leadership but through the use of poetry. According to Armitage poetry can be used as part of reflexive practice to assist in opening up individuals’ experiences and relationships within the workplace context. Reviewing literature and examples of practice which argue for, and demonstrate, ‘the cross-fertilization of the arts and leadership’ Adler (2006: 487), the article includes two poems: ‘The Moral Man’ and ‘The Shadow Man’. Both poems were written by Armitage following experiences of toxic leadership. Armitage then proposes ‘a road map’ for educational practitioners who may wish to use poetry as part of their pedagogical approach. Reflecting on his experience of using poetry in the classroom to explore toxic leadership, Armitage concludes by asking a series of questions for HRD and leadership developers, including: ‘How can leadership and HRD programmes be operationalized and designed in order to deliver inclusive and safe working environments in practice?’, and ‘Can art be used as an alternative vehicle to identify and conceptualise leadership issues and/or problems within the organization?’ Alongside the other papers in this issue, Armitage’s contribution is to demonstrate how critical interrogation of theory and practice can be deepened through engagement with arts-based methods.

Recognising the lack of evaluative studies examining the effectiveness of arts-based leadership development interventions Garavan, McGarry, Watson and O’ Brien complete this issue by evaluating a leadership drawing exercise in comparison with a more traditional leadership development intervention. Both interventions occurred in the context of a leadership development programme for one hundred and sixty four leaders working in a large pharmaceutical MNC. Their findings indicate that the arts-based method was effective in enhancing emotional intelligence, leader identity and feedback orientation. The conventional intervention by contrast, was shown to enhance openness to experience and feedback orientation. Garavan et al conclude by suggesting the application of longitudinal approaches to determine the sustainability of development outcomes in order to understand whether long-term change does result from engagement with arts-based leadership development interventions.

Acknowledgements

The authors would like to thank the Editor-in-Chief and reviewers at ADHR for their constructive feedback on this article and the full content of this issue during the blind review process.
Declaration of Conflicting Interests

The authors declared no potential conflicts of interest with respect to the research, authorship and/or publication of this article.

Funding

The authors received no financial support for the research, authorship and/or publication of this article.

Editor Biographies
Gareth Edwards - Gareth is Associate Professor of Leadership Development at Bristol Business School, the University of the West of England, UK. His current interests are in the application of ideas on aesthetics and leadership, community and dispersed theories of leadership. He also researcher and writes on issues relating to leadership learning and development. He has published work in the journals Leadership, Management Learning, the International Journal of Management Reviews, Leadership and Organization Development Journal and Advances in Developing Human Resources. He has also guest edited special issues in Management Learning and Advances in Developing Human Resources. Gareth is also on the editorial board of four journals, Leadership, Leadership and Organization Development Journal, Advances in Developing Human Resources and the International Journal of Public Sector Services. Gareth is also a co-author of a leadership textbook. Before entering academia Gareth spent twelve years working for a leadership and executive development company. Contact Details: Bristol Business School, University of the West of England, UK, Frenchay Campus, Coldharbour Road, Bristol, BS16 1QY, UK, Gareth3.edwards@uwe.ac.uk, +44 (0)117 328 1707

Carole Elliott - Carole is senior lecturer in management at Durham University Business School. Her research interests lie in three main areas: critical approaches to management and leadership learning; critical human resource development, and qualitative research methods, particularly the development of critical hermeneutic and visual methods in management and Organization research. She is currently working on papers examining visual representations of women’s leadership in the media and popular culture, and the role of websites in creating revisionist histories of organizations. She is associate editor for the Routledge journal Human Resource Development International, and sits on the Editorial Board of Management Learning. Carole is a Fellow of the Leadership Trust Foundation. Contact details: Durham University Business School, Mill Hill Lane, Durham DH1 3LB. UK. Email: c.j.elliott@durham.ac.uk. Tel: + (0) 191 334 5553

Marian Iszatt-White - After a successful career in financial risk management, latterly as Group Treasurer of Top 100 plc Enterprise Oil, Marian worked as a training consultant for an educational trust, where she specialized in the development of leadership skills, particularly in the public sector. She undertook her PhD research at Lancaster University, within the Centre for Excellence in Leadership, conducting an ethnomethodologically-informed ethnography of leadership in the learning and skills sector. Within this thesis, special areas of interest included leadership as ‘emotional labour’ and the idea of strategy as a ‘perennially unfinished project’, both of which remain core research interests. She is now a Lecturer in the Department of Management Learning and Leadership at Lancaster and was until recently Director of the School’s Executive
MBA. She is Track Chair for the Leadership and Leadership Development special interest group within BAM and co-authored a critical leadership textbook (her second) for postgraduate students which came out in January 2014. Contact detail: Lancaster University Management School, Department of Management Learning and Leadership, Bailrigg Campus, Lancaster, LA1 4YX. Email: m.iszattwhite@lancaster.ac.uk. Tel: + (0) 1524 594706

Doris Scheditzki - Doris Scheditzki is Associate Professor in Organizational Leadership at Bristol Business School, University of the West of England. Her research focus is on leadership and explores the areas of cross-cultural studies of leadership, discourse and leadership, leadership as identity, psychoanalytic approaches to leadership and the role of national language within cultural leadership studies. Recent publications on the subject include articles in Leadership, Scandinavian Journal of Management and Management Learning as well an edited book on Worldy Leadership (Palgrave) and a textbook on Leadership (Sage). A secondary research interest is exploring the nature, purpose and use of blended learning approaches at postgraduate level. Doris has recently published an article on blended learning at postgraduate level in The International Journal of Management Education.
