Table of Contents

Chapter 1: Introduction to the research	1
Focus of the research.....	2
Contextualisation of this PhD	4
Research Question	6
Research Aim	6
Research objectives	6
My Background	7
Research methodology	8
Introduction	8
A definition of action research.....	9
The four phase research methodology.....	11
Research in art and design.....	12
Materials rationale.....	14
Soda.....	14
Lime.....	14
Silica	14
List of materials.....	16
List of Equipment	16
Particle sizes.....	17
Summary	18
Chapter 2: Egyptian faience contextual review	19
Section 1: Historical context	20
What is Egyptian faience?.....	20
Terminology	20
Egyptian faience uses.....	21
Egyptian faience development	27

What was it made of?	28
Physical properties of faience paste	29
Forming methods.....	31
Organic binders.....	31
How was it glazed?.....	32
Colour palette	36
Why was faience significant?	36
Section 2: Faience in current contexts.....	38
Ceramic stains	38
What is appealing about Egyptian paste?.....	38
What are the limitations of faience?	41
Section 3: Visual assessment	43
Faience workshop	44
Contemporary artwork: Zahed Tajeddin: <i>Nu Shabtis</i>	55
Egyptian faience Vessel.....	60
Summary	64
Chapter 3: 3D printing introduction and contextual review	65
Section 1: 3D printing introduction	66
Process description: Powder binder printing.....	71
Section 2: Contextual review: 3D printing material/process development for creative applications in art and design	80
Paste extrusion.....	80
Powder binder printing.....	84
Recent innovations and technological developments in the field of ceramic 3D printing.....	86
Summary	87
Chapter 4: Practical experiments into the development of an efflorescence paste for 3D extrusion	85

Introduction	85
Trial 1: Paste development study	91
Trial 2: Simple object fabrication	93
Trial 3: Object development	95
Trial 4: Improved resolution trial	98
Trail 5: Microwave kiln firing.....	100
Discussion: Advantages and disadvantages of efflorescence paste extrusion	102
Glassy body development for 3D paste extrusion	103
Chapter summary	105
Chapter 5: Practical experiments into ceramic powder binder printing and cementation glazing	106
Introduction	106
Section one: Cementation glazing and its suitability for powder binder 3D printing	107
Rationale for the development of a cementation 3D printing process	107
Introduction to the cementation glazing technique	110
The glazing mechanisms	110
Summary	113
Section two: Cementation 3D printing trials	114
Equipment and material preparation	115
Group 1	119
Trial 1: Initial glaze and body composition test	119
Trial 2: Sodium chloride trial.....	123
Trial 3: Substitution of calcium carbonate for calcium hydroxide	126
Group 2	129
Process outline.....	129
Trial 4: 3D printing cementation body and glaze trial	131
Trial 5: Sodium carbonate reduction	135
Group 3	141

Trial 6: Colour trials.....	141
Trial 6: Transparent glaze.....	144
Trial 7: Coloured cementation body	145
Group 4	147
Trial 6: Gradient kiln test.....	147
Trial 7: Object development	153
Group 5	160
Trial 8: Alternative/additional flux.....	160
Trial 9a: Bisque firing to improve body strength	163
Trial 9b: Bisque firing to improve glass formation.....	169
Trial 10: Ludox infiltration.....	172
Summary of development work	175
Trial 11: Parian body for ceramic powder binder printing	177
Equipment and material preparation	177
Chapter summary	179
Chapter 6: Conclusion	180
Review of the research question, aims and objectives	181
Key contributions.....	186
Cementation body and glaze composition for powder binder 3D printing.....	189
Efflorescence paste for 3D extrusion.....	190
Parian composition for powder binder 3D printing.....	190
Secondary contributions	191
Sharing knowledge with other research specialists: UCL, and the Petrie museum	191
Impacts beyond academia	191
Opportunities for future research	192
Bibliography	194
Appendix 1: List of published work and presentations.....	202
Conference proceedings: presentations and papers.....	202

Presentations, public demonstrations and press features	202
Appendix 2: Practitioner example – The Fishpig	204
Appendix 3: Practical examples of 3D printed, cementation glazed ceramics	208
Appendix 4: Practical experiments into 3D printable ceramic bodies that self-glaze through efflorescence	211
Introduction	211
Section One: Efflorescence body development for powder binder 3D printing.	212
Introduction	212
Trial 1: 3DP efflorescence body 1a (EB1a)	217
Trial 2: 3DP efflorescence body 1b (EB1b).....	220
Trial 3: Gradient kiln trial	224
Trial 4: Object development	230
Trial 5: Broad collar necklace	235
Advantages and disadvantages of this process compared to current ceramic 3D printing techniques	240
Section Two: Application glazing for 3D printed ceramics	242
Introduction	242
Efflorescence slip	244
Appendix 5: Particle size analysis.....	249
